

IO-Link

Product Quality Policy

Version 1.2
January 2021

Order No: 10.132

File name: IO-Link-Product_Quality_Policy_10132_V120_Jan21

This document has been prepared, approved, and released by the IO-Link Steering Committee.

Important notes:

NOTE 1 The IO-Link Community Rules shall be observed prior to the development and marketing of IO-Link products. The document can be downloaded from the www.io-link.com portal.

NOTE 2 Any IO-Link Device shall provide an associated IODD file. Easy access to the file and potential updates shall be possible. It is the responsibility of the IO-Link Device manufacturer to test the IODD file with the help of the IODD-Checker tool available per download from www.io-link.com.

NOTE 3 Any IO-Link devices shall provide an associated manufacturer declaration on the conformity of the device. A corresponding form with references to relevant documents is available per download from www.io-link.com.

Disclaimer:

The attention of adopters is directed to the possibility that compliance with or adoption of IO-Link Community specifications may require use of an invention covered by patent rights. The IO-Link Community shall not be responsible for identifying patents for which a license may be required by any IO-Link Community specification, or for conducting legal inquiries into the legal validity or scope of those patents that are brought to its attention. IO-Link Community specifications are prospective and advisory only. Prospective users are responsible for protecting themselves against liability for infringement of patents.

The information contained in this document is subject to change without notice. The material in this document details an IO-Link Community specification in accordance with the license and notices set forth on this page. This document does not represent a commitment to implement any portion of this specification in any company's products.

WHILE THE INFORMATION IN THIS PUBLICATION IS BELIEVED TO BE ACCURATE, THE IO-LINK COMMUNITY MAKES NO WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, WITH REGARD TO THIS MATERIAL INCLUDING, BUT NOT LIMITED TO ANY WARRANTY OF TITLE OR OWNERSHIP, IMPLIED WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR PARTICULAR PURPOSE OR USE.

In no event shall the IO-Link Community be liable for errors contained herein or for indirect, incidental, special, consequential, reliance or cover damages, including loss of profits, revenue, data or use, incurred by any user or any third party. Compliance with this specification does not absolve manufacturers of IO-Link equipment, from the requirements of safety and regulatory agencies (TÜV, IFA, UL, CSA, etc.).

 **IO-Link** ® is registered trademark. The use is restricted for members of the IO-Link Community. More detailed terms for the use can be found in the IO-Link Community Rules on www.io-link.com.

Conventions: In this specification the following key words (in **bold** text) will be used:

may:	indicates flexibility of choice with no implied preference.
should:	indicates flexibility of choice with a strongly preferred implementation.
shall:	indicates a mandatory requirement. Designers shall implement such mandatory requirements to ensure interoperability and to claim conformity with this specification.
highly recommended:	indicates that a feature shall be implemented except for well-founded cases. Vendor shall document the deviation within the user manual and within the test report.

IO-Link Product Quality Policy – Organization and procedures

1 Management summary – scope of this document

This policy describes the necessary procedures on how to attain a manufacturer declaration for an IO-Link Master or Device.

Furthermore, in clauses 4 and 5 it gives hints

- for the successful preparation of testing,
- for brand labelling, and
- for dealing with product variants.

2 Overview of related documents

The IO-Link Community uses a set of policies to organize work of its members, providers, and test centers and to maintain quality assurance (mainly interoperability) of member products as shown in Figure 1. The technical specifications ([2], [3], and [4]) are building a technical platform for a certain generation of Devices and Masters, for example "Package 2020", and its features are supposed to stay stable for several years.

Associated to a Package is a certain release of this Product Quality Policy document defining stability times and transitions from one Package to another.

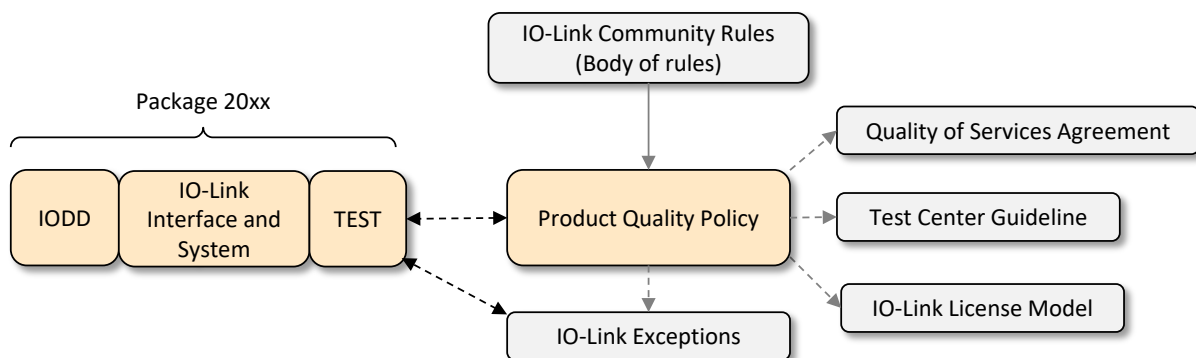

Figure 1 – Related documents

Table 1 provides information on IO-Link's technical and policy documents.

Table 1 – Subject of IO-Link's technical and policy documents

Title of document	Subject	Ref
IO-Link Interface and System	Specification of IO-Link interface, communication, and engineering technology	[1], [2]
IO-Link IO Device Description	Specification of IO-Link Device parameters in a formal language (XML)	[3]
IO-Link Test	Specification of TestCases for physical tests and behavioral tests for Devices and Master	[4]
IO-Link Community Rules (Body of rules between IO-Link members and the PNO)	This document governs the cooperation between IO-Link members or licensees and the PNO and describes the rights and obligations of the partners.	[5]

Title of document	Subject	Ref
IO-Link License Model	This document describes the license model for non-IO-Link members.	[6]
Quality of Services Agreement	The purpose of this agreement is to establish a quality assurance system between IO-Link Community and the IOL-Competence Centers (IOLCC) for the technologies of IO-Link.	[7]
Test Center Guideline	This document describes the preconditions for becoming a test laboratory accredited by IO-Link community. It additionally describes the rules for the performance of such an IOL Test Center (IOLTC).	[8]
IO-Link Exceptions	This document describes the change and exception management in case of implementation or test deviations.	[9]

26

27 **3 Terms, definitions, and abbreviated terms**28 **3.1 Terms and definitions**

29 For the purposes of this document, the terms and definitions given in [2], [3], and [4], as well
30 as the following apply.

31 **3.1.1**32 **Master Tester**

33 tool, intended to perform test cases for IO-Link Master according to the IO-Link test specifica-
34 tion, approved by IO-Link quality authorities

35 **3.1.2**36 **Device Tester**

37 tool, intended to perform test cases for IO-Link Devices according to the IO-Link test specifica-
38 tion, approved by IO-Link quality authorities

39 **3.1.3**40 **IODD**

41 electronic I/O and parameter description in XML of an IO-Link Device for its configuration and
42 parameterization to match certain application requirements

43 **3.1.4**44 **DeviceID**

45 unique IO-Link Device identification allocated by a vendor

46 **3.1.5**47 **VendorID**

48 unique vendor identification assigned by the IO-Link Community

49 **3.1.6**50 **MasterID**

51 unique IO-Link Master identification allocated by a vendor

52 **3.1.7**53 **OEM**

54 original equipment manufacturer, providing a part or subsystem used in another company's
55 assembled product

56 **3.2 Symbols and abbreviated terms**

IOLCC	IO-Link Competence Center
DUT	Device under test
MD	Manufacturer declaration
uC	Microcontroller
PL	Physical layer
IOLTC	IO-Link Test Center

57 **4 Manufacturer declaration**

58 **4.1 General rules**

- 59 • The Manufacturer Declaration states compliance to the IO-Link specifications and shall be
60 signed by vendors based on tests according to IO-Link test specifications.
- 61 • Members are entitled to perform the required tests under their own responsibility. The Man-
62 ufacturer Declaration has no expiring date.
- 63 • Non-members are obliged to have the tests required for the manufacturer declaration per-
64 formed at an accredited IO-Link Test Center (IOLTC) and to pay for these tests as well for
65 the license fee (according to the IO-Link Community Rules). After every 3 years (provided
66 that no change has been made to the product properties), the license can be extended for
67 another 3 years. If the device is unchanged, the manufacturer shall inform the IO-Link Sup-
68 port Center by sending a written note. Otherwise (for example if the device has been
69 changed), the required steps for a new version of the manufacturer declaration shall be
70 performed. For details see clause 4.4.

71 **4.2 The way to manufacturer declaration (MD)**

72 The preconditions for an MD are:

- 73 • Each Device or Master shall be listed in the MD,
- 74 • Masters or Devices having an identical IO-Link interface require only one MD,
- 75 • Prerequisites for Devices are Vendor ID and IO-Link ID,
- 76 • Prerequisite for Master is a MasterID

77 **4.2.1 Rules for IO-Link members**

78 The manufacturer of a Device or a Master shall perform the appropriate tests described in [4]
79 and document the results in a test report.

80 Test exceptions for not implemented "highly recommended" features specified in [2] shall be
81 documented within the user manual and within the test report for the manufacturer declaration.

82 After successful testing, the manufacturer/vendor

- 83 – shall sign the MD,
- 84 – shall archive both the test report and the MD on manufacturer site, and
- 85 – can send the MD to the IO-Link Support Center for publication on the approved component
86 list.

87 **4.2.2 Rules for non-IO-Link members**

88 To get the license granted, it is necessary for a non-IO-Link member to have the required tests
89 performed at an accredited IOLTC and to pay for these test services as well as for the license
90 fee (for details see [5]). The IOLTC issues a test report and the confirmation of a successfully
91 passed test.

92 The test service shall be paid to the IOLTC, the license fee to the IO-Link Support Center.

93 Test exceptions for not implemented "highly recommended" features specified in [2] shall be
94 documented within the user manual and within the test report for the manufacturer declaration.

95 After successful testing, the manufacturer/vendor

- 96 – shall sign the MD,
- 97 – shall archive both the test report and the MD on manufacturer site,
- 98 – shall send the MD and the confirmation of an IOLTC to the IO-Link Support Center for ar-
99 chiving purposes,
- 100 – can request publication on the approved component list.

101 4.3 Brand labelling and permitted Device deviations

102 Brand labeled products are functionally identical Devices distributed by different companies.
 103 Only differences in the outer design (e. g. housing), the product identification or parameter
 104 descriptions are permitted.

105 Brand labeled products require the VendorID (VID) of the branding company.

106 4.4 Additional procedures regarding re-testing

107 4.4.1 General approach

108 This clause describes the regulations for re-testing whenever changes have been made at an
 109 already tested Device or Master. Either a full test or a partial test shall be performed. This leads
 110 to a new test report and corresponding MD.

111 Due to the increasing complexity of Device variants, the following clause can only cope with
 112 fundamental deviations of the IO-Link interface (communication and/or timing). Other deviations
 113 should be negotiated between manufacturer and an IOLTC.

114 4.4.2 Devices

115 Table 2 shows the consequences of fundamental changes/deviations in a brand label Device.

116 **Table 2 – Consequences of changes to the Device interface**

Changes/deviations	New DeviceID	PL test	EMC test	Protocol test	New MD
Software changes in application new functions / parameters	X			X	X
Software changes influencing communication / timing	X	X		X	X
Hardware changes influencing communication		X	X		X
Bug fix in communication software NOTE				X	X
Bug fix in hardware		X	X		X
NOTE Communication software is part of the Device software, which represents the implementation of the protocol layers, data objects, methods and interfaces as defined in [2].					

117

118 4.4.3 Masters

119 Table 3 shows the consequences of fundamental changes/deviations in a brand label Master.

120 **Table 3 – Consequences of changes to the Master interface**

Changes/deviations	PL test	EMC test	Protocol test	New MD
Software changes in gateway application			X	X
Software changes influencing communication / timing			X	X
Hardware changes influencing communication	X	X		X
Bug fix in communication software NOTE			X	X
Bug fix in hardware	X	X		X
NOTE Communication software is part of the Device software, which represents the implementation of the protocol layers, data objects, methods and interfaces as defined in [2].				

121

122 5 Testing and test tools

123 5.1 Prerequisites for type testing

124 Table 4 shows the prerequisites for type testing of Device and Master.

125 **Table 4 – Prerequisites for type testing**

Type	Final product before release	IODD (checked, stamped)	VendorID	DeviceID	MasterID
Device	X	X	X	X	–
Master	X	–	X	–	X

126

127 5.2 Test of an IODD (only for Devices)

128 Every Device manufacturer shall provide an IODD file for the DUT. The IODD describes the
129 features of a Device (I/O data structures and parameters), which are also used by Device test-
130 ers for protocol tests.

131 The correctness of the IODD file shall be tested with the help of an appropriate IODD checker.

132 5.3 Test of the physical layer (PL) and EMC

133 The PL and EMC test shall be performed according to [2] and [4].

134 5.4 Test of the Protocol

135 The protocol test shall be performed according to [4]. In case of Devices a checked IODD shall
136 be used for the test.

137 5.5 Tools for testing

138 There are several test systems on the market supporting tests and generating test reports,
139 which are recommended by the IO-Link quality authority.

140 These test systems comprise

- 141 • Physical layer tester
- 142 • EMC tester
- 143 • Device tester (protocol)
- 144 • IODD checker
- 145 • Master tester

146

147 6 Quality center

148 The IO-Link community is operating a Quality Center for the clearing of MD relevant quality
149 complaints or exceptions (see [9]) regarding IO-Link specifications and validity periods.

150 Complaints shall be reported in english language via e-mail to quality@io-link.com.

151
152
153

Annex A
(informative)
Validity of packages

A.1 Validity periods

155 All relevant IO-Link specifications required for a certain functional platform are bundled into a
156 package. These packages have a dedicated validity period for implementation and release of
157 products to the market. After the release of a new package the former package will be valid for
158 a specified transition period. After expiration of the validity of a package no new Devices or
159 Master shall be released to the market based on this package. Figure A.1 demonstrates the
160 principle.

161
162

Figure A.1 – Principle of package validity

163 Table A.1 shows the validity periods for current IO-Link packages.

Table A.1 – Validity periods for current packages

Package	Release date	End of validity date
Package 2015	2015-03-07	2022-12-31
Package 2020	2021-02-01	open

165

A.2 Package 2020

167 Table A.2 shows the content of Package 2020.

Table A.2 – Content of Package 2020

Term	Version
IO-Link Interface and System Specification	V1.1.3
IO-Link Test Specification	V1.1.3
IODD – IO Device Description Specification	V1.1.3
Manufacturer declaration	2021-02-01
Corrigendum Package 2020	V1.0
